

The construction of this trail has integrated the efforts of many governing agencies of Miami County; The Miami County Parks District, the City of Troy, Concord Township, the Miami Conservancy District, with private cooperation from Martin-Marietta Aggregates, and assistance from the The Troy Foundation.

To our knowledge this is the first ever design-build recreational trail project of its type utilizing Clean Ohio funds.

The process of trail construction required restoring an abandoned railroad bridge, traveling along a river, underneath a State highway, along an older railroad bed, by a golf course, and a major mining and asphalt facility. Although the challenges were many, the successes may be judged by the reality of the existing trail.

The new construction, totaling 3.2 miles, has connected the sections of trail from Lock 14 through the City of Troy to Lytle

Road. This construction completes an overall segment of approximately 10.5 miles.
